Preamble

Dear Patient,

I feel committed to the principle of treating my patients according to the latest scientific knowledge, in order to provide a modern, gentle healing process, as pain free as possible.

OSTEORA®

The treatment with OSTEORA® is one of the methods achieving sustained healing of bone and soft tissue defects. OSTEORA® is a highly efficient medical device healing bone and soft tissue defects faster, reducing inflammation and pain symptoms.

Jaw-bone inflammation and heavy swelling, occurring sometimes after extractions and surgeries, as a traumatised wound area reaction, can be noticeably reduced using OSTEORA®.

OSTEORA® as wound ointment

Your Health – Our Concern

Antibiotic and pain killer medication can in most cases be avoided. Inflammations, swellings and pains can be noticeably minimized by OSTEORA®'s natural effectiveness. Usually, the day after severe surgery, such as apical defects, or after implants insertion, you are already feeling well.

OSTEORA® contributes to the preservation of your own teeth. It stimulates periodontal regeneration, that is the restoration of dental attachment apparatus, so that loose teeth get consolidated again.

In case of tooth gaps, OSTEORA® helps reinstate your teeth aesthetics faster. Post extraction bone build-up with OSTEORA® allows the implant insertion after a short period of time. Your denture aesthetics will be faster reinstated.

This method displays excellent tissue compatibility and biological safety (protein free).

Application Areas

- Periodontology
- Extractions
- Wisdom teeth surgery
- Bone build-up
- Soft tissue wound healing
- Wound cover in Implantology

OBTURAL®

OBTURAL® is a protective surface covering for a wound treated with OSTEORA®. OBTURAL® supports OSTEORA®'s effect through its antibacterial, anti-inflammatory and analgesic properties.
